

REPORT OF ACTIVITIES IN CHAMBAMONTERA

On March 13, 2011 was a visit to the town of Chambamontera, in order to carry out various activities to promote the organization and train people in managing their electricity service.

1. OBJECTIVES.

- Continue training on energy use, calculate the energy consumption and cost.
- Make arrangements for the proper functioning of energy services in each of the users.
- Make agreements on the implementation of the rate of energy consumption and management model.

2. ACTIVITIES.

2.1. Meeting with users

- Trained users on the following topics: How to calculate the amount of energy consumed in a month and how to calculate the cost of energy consumed per month.
- It agreed to a period maximum until 31 this month to fulfill user tasks missing and the purchase of meters and other tools that are missing from some users to start the control of energy.
- It was agreed that all users pay for this month (March) the sum of 10.00 new soles for energy, while establishing and ends to implement the management model, this money be used to pay the operator and some documents formalization of the service.
- It was agreed that the mayor of Chambamontera and the users talk with the provincial mayor (to seek a commitment of support and involvement in the project management model). This meeting will serve to schedule a meeting in which I will be present and to expose to the mayor, what would be the participation of the municipality.
- Was achieved that the local peasant patrols are involved in supporting the security.
- It was agreed to stabilize the association "Progresistas de Cambamontera" allowing the admission and removal of new users and some users who do not live in Chambamontera.

2.2.- TRAINING TO USERS IN THE USE AND ENERGY SAVING. (first part)

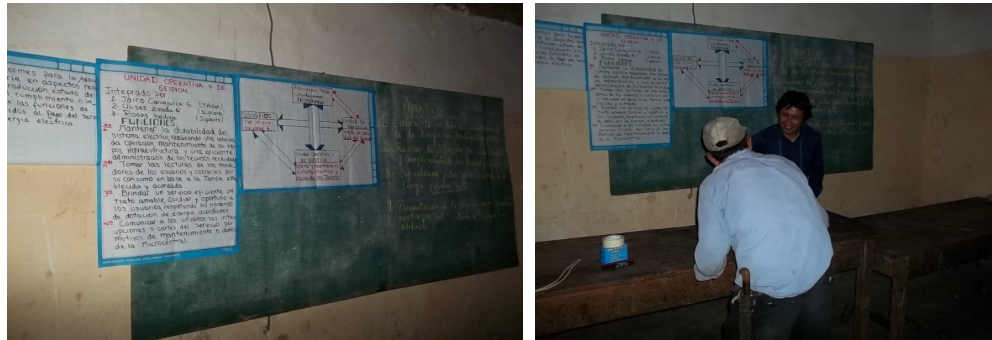

All users were given a brief guide to the use of energy, where they reported on:

How to save energy, appliances consume more electricity, how to use appliances that consume much energy and use saving light bulbs in homes?

2.3.- PRESENTATION OF THE MANAGEMENT MODEL TO USERS.

It was exposed the proposed management model for their suggestions and amendments by the users. It was explained the functions performed by operators who make up the unit operation and management of power system in the management model. Also, is scheduled for the next meeting for discussion of the functions of the other components of the management model and the amount of energy service fee.

At the end of the meeting each participant signed the document containing the agreements.

3. CONCLUSIONS..

- The power system is working normally and no faults neither in equipment neither in service.
- Users are satisfied with the service and the work done by the operator.
- There is interest from users in an organized work in management and project management.
- Has been achieved standardized and provide service to 95% of all users or people for whom the service was scheduled.
